PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience across backend engineering, full-stack development, and applied AI. Built LLM-powered workflows, RAG applications, asynchronous APIs, and privacy-aware data pipelines using Python, FastAPI, Node.js, TypeScript, PostgreSQL, and Redis. Experienced in integrating AI capabilities into software products, designing evidence-grounded retrieval workflows, and delivering features across the backend and frontend.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, C++
AI: LLM Integration, RAG, AI Agents, MCP, LangChain, LangGraph, Ollama
Backend: FastAPI, Node.js, REST APIs, GraphQL, Microservices, Server-Sent Events (SSE)
Frontend: React, HTML, CSS
Databases: PostgreSQL, MySQL, Redis, PgVector
Tools & Security: Docker, Git, PII Anonymization, Semgrep, OWASP ZAP

WORK EXPERIENCE

Guidizy **Jul 2025 – Aug 2026**
Software Engineer – AI & Full Stack *Remote*

- Built LLM-powered integrations using RAG and MCP across **10+ backend microservices**, enabling agentic workflow automation.
- Automated FAQ-node generation from customer-uploaded knowledge-base PDFs, reducing manual FAQ-authoring effort by approximately **99%**.
- Developed asynchronous execution pipelines using **Redis, SSE, Node.js, TypeScript, and PostgreSQL** to support real-time workflow execution.
- Integrated PII detection, data anonymization, Semgrep, and OWASP ZAP into AI-processing and CI workflows to strengthen privacy and application security.

QualityKiosk Technologies **Apr 2024 – Jun 2025**
Digital Quality Engineer *Mumbai*

- Validated REST APIs and backend data integrity using SQL verification and regression testing for a banking wealth-management platform; resolved **70+ Jira tickets** while collaborating with engineering teams.

PROJECTS

Trace – AI E-commerce Investigation Platform [GitHub] Python • FastAPI • React • MySQL

- Developed a multi-agent investigation workflow with an orchestrator and specialized Order, Sales, and Customer agents to investigate e-commerce issues using structured evidence.
- Integrated MCP-based tools, bounded agent-to-agent communication, and input/output guardrails to constrain investigation workflows and handle unsupported requests.

FATUY – AI Financial Assistant [GitHub] Python • FastAPI • PostgreSQL • Redis

- Designed a hybrid retrieval architecture routing structured financial queries to PostgreSQL and contextual queries to vector search. Architecture target: **1M+ transactions and 1,000 users**; these are design targets, not verified production workload.
- Designed a 3-layer context system for conversation history, verified financial data, and long-term memory. Added JWT authentication, PII anonymization, user-scoped retrieval, token-bucket rate limiting, and SSE streaming.

RAWJD – AI Resume Intelligence Platform [GitHub] React • TypeScript • Express • Redis

- Built an LLM-powered resume/JD analysis application using semantic retrieval, evidence ranking, context caching, and prompt optimization to ground generated insights in source documents.
- Reduced prompt size by **65–75%** and token consumption by **60–70%** (as previously reported); implemented PII tokenization with encrypted Redis mappings and automatic **6-hour expiration**.

ACHIEVEMENTS

- **Bessemer Tech Catalyst Hackathon:** Finalist among the top **300 of 10,000+ registrants** (top **3%**).
- **HackerRank: 5-Star** ratings in Problem Solving and Python.

EDUCATION

Sagi Rama Krishna Raju Engineering College **2021 – 2024**
Bachelor of Technology in Computer Science
